

Remote Network Viewing

FlowCaster software lets you send high quality video using a wide range of IP protocols, from sources like your hardware, from an editor, or from applications on your system. The FlowCaster.live site adds chat room style collaboration, and can provide session details as markers for editor import and conform. Many low cost and free players are available, as well as more robust solutions for the enterprise or facility.

Editor Plugins

FlowCaster.live Site

AJA
VIDEO SYSTEMS

Hardware Input

Direct plugins for Adobe, Avid, Resolve, and Assimilate. Set the editor output to FlowCaster, and send full frame video, with audio, time code, closed captions, and ancillary data.

Free remote conferencing site for secure and private group review and approval. Time code based comments and drawings made by participants are then added directly to the timeline.

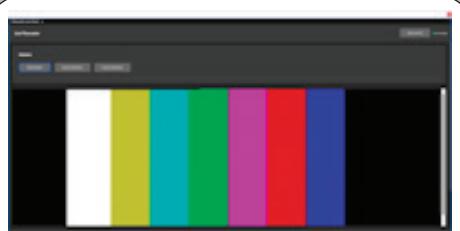

Send the input of your AJA, Blackmagic, or Bluefish444 hardware via IP. Many low cost USB/DirectShow devices supported as well for economical IP streaming workflows.

FC VirtualCam

Session Record

Review Panel

Using a meeting room like Google Meet, or Webex Meeting for content review? FlowCaster can show up as a virtual webcam in these sites, and send its output as a meeting participant.

Start up a session and press record. A small webm video will be created, for sharing with all the stakeholders. Document the session, and never lose an important comment or concern.

Live Review Panel for Adobe and Avid lets you view the session in the editor, with real time feedback within the application. No switching between the editor and the internet needed.

Collaborative Review Workflows

Live Edit Review with FlowCaster.live

Use FlowCaster on the www.flowcaster.live site for real time group review of edit sessions anywhere in the world, without rendering or uploading your media to a server!

FlowCaster.live receives audio/video/captions/time code from the editor's output in real time, while providing a shared area of talk, webcam, commenting, and collaborative drawing, all time code locked to your edit. Changes can be made in real time, or noted in the comments and drawing, and saved for later retrieval. All the comments and drawings can be saved and loaded as session markers back into Premiere, Media Composer, Resolve and many others. The FlowCaster.live site is free. Paid support packages add more workflows.

Integrate with Net-X-Code for Live Event Review

Net-X-Code Server can ingest to a high res and proxy simultaneously, so the proxy can be loaded into FlowCaster.live, and the participants can use tools like chat/webcam, comment/emoji, telestration, session markers and more to collaborate on producing sequences for delivery. Live Event Review lets creatives work together to make decisions without tying up an editor, and more efficiently realize their vision.
